CODEKENZ / QA SAMPLE

Bilingual website QA

Arabic and English | 22 November 2026

Scope and environment

Public Codekenz home, store, and monthly Excel report pages. Microsoft Edge on Windows, light mode. Responsive emulation at 390 px and desktop at 1280 px.

Page and viewport results

Page pair	390 px AR / EN	1280 px AR / EN
Home	**2 / 2 passed**	**2 / 2 passed**
Store	**2 / 2 passed**	**2 / 2 passed**
Monthly Excel report	**2 / 2 passed**	**2 / 2 passed**

Each run checked text direction, title fit, horizontal overflow, in-page targets, language switching, and keyboard focus after skipping navigation. All six mobile menu checks passed. Escape closed the menu and returned focus.

Both Home to Store journeys opened the matching language and reached the products section.

OBS-01 | Workbook save needs a device check

Reproduce in Edge at 1280 px. Open the Monthly Excel page in each language and activate the workbook link with Enter.

Expected outcome is a clear saved-file or viewer result. The test session reported no completed save in either language. Both XLSX and PDF links returned HTTP 200 and matched the reference files.

Retest in a clean browser profile. Record the resulting viewer or saved file and decide whether the label should promise a direct download.

Coverage results apply to the pages and environment listed above.
