CODEKENZ / SERVICE SAMPLE

Review one TestFlight submission blocker

Synthetic build history · Local TestFlight readiness analysis

Local evidence supported the duplicate build diagnosis.

Check	Expected	Observed
Identify	Match app, platform and marketing version	The attempted build matched the synthetic iOS 1.4.0 record.
Check build 42	Detect a duplicate in the supplied build history	Build 42 was already present in the fixture.
Verify build 43	Check the suggested number against the same data	Build 43 passed the local fixture check.

Client deliverable

Written local diagnosis and an owner verification checklist.

Package scope

Review one TestFlight or App Store submission blocker from evidence you supply. Explain the likely cause and the checks your account owner can do next.
